

THE **RECORDAK**® RELIANT **300** MICROFILMER, Model RO

THE RECORDAK RELIANT **300** MICROFILMER, Model R0

**For middle range work-loads and budgets...
is uniquely designed to grow with your business**

RELIANT is a Recordak trademark which has long been synonymous with 16mm microfilmers of incomparable reliability and efficiency. The Recordak Reliant 300 Microfilmer has been newly created to bring traditional Reliant quality and dependability to middle range microfilming work-loads and middle range budgets. It is ideally suited for smaller office, branch, or departmental operations in which the work volume is insufficient to justify a high-speed, higher-cost microfilmer, but exceeds the capacities of the slower, lowest-cost units.

Engineered and built by Kodak to Recordak quality standards, the Reliant 300 is a microfilmer of superb photographic capabilities. Simplicity and efficiency of operation are inherent design features. Versatility and adaptability to cover a wide range of individual requirements are provided for in the selection of optional accessories which are available to "customize" or upgrade the Reliant 300 Microfilmer on a when, as, and if needed basis.

The standard Reliant 300 model incorporates many unique operational and convenience features which are as forward-looking in concept as they are productive of higher performance standards in day-to-day microfilming operations. Hand-level document feeding, eye-level ejection and document stacking, and a single convenient control and visual signal panel combine to minimize operator effort and lost motion. The film unit receptacle is handily accessible through a hinged access panel set into the top of the low-silhouette cabinet. Operator "housekeeping" maintenance responsibility is reduced. There are no optical glass guides to be removed and cleaned as a daily requirement. Film units, available for 20X and 32X reductions are compact, easy to load with single or twin rolls of 16mm microfilm... and, of course, are readily interchangeable.

Audible and visual signals to alert the operator to incorrect positioning of the film unit, end of film supply, exposure lamp failure, and an indicator to show the position of the duplex-duo microfilming control are incorporated in the basic Reliant 300 Microfilmer unit.

The Recordak Reliant 300 Microfilmer is designed to grow with your business. As volume increases, accessories can be added to automate and to expand the capacity of your Recordak Reliant 300 Microfilmer. Add-on of optional accessories can be accomplished at any time by your Recordak Service Representative.

- RECEIVING TRAY** —
sloped bed aids orderly stacking of returned documents.
- SELECTOR CONTROL** —
determines which method of microfilming is used ... upper, lower, or both sides of the document.
- SPACING BUTTON** —
allows the operator to make blank film spacing to separate groups of images on the film.
- FILM ADVANCE MONITOR UNIT** —
indicates proper operation of the film unit.
- FILM FOOTAGE INDICATOR UNIT** —
tells at all times how much film remains on the roll.
- ON-OFF SWITCH** —
- LAMP FAILURE SIGNAL** —
warns the operator of exposure lamp failure.

Standard Microfilmer

Optional Accessories

- AUTOMATIC FEEDER** —
automatically separates and feeds documents into the microfilmer at speeds up to 300 per minute.
- ENDORSER** —
automatically endorses or face cancels documents as they pass through the microfilmer. Imprint dies made to order.
- KODAMATIC INDEXER INPUT CONTROL** —
exposes index code lines between images simultaneously with the photographing of documents. Facilitates high-speed reference to record files on microfilm.
- MANUAL EXPOSURE CONTROL** —
allows the operator to quickly adjust the exposure level for best results according to colors of documents being photographed.
- DOCUMENT COUNTER** —
accumulates a count of documents photographed...has split-second push-button reset.

DIMENSIONS — Height, 15"; Width, 25"; Depth, 19"; Throat, 9½". Weight: 75 pounds; with feeder and endorser — 100 pounds.

THE RECORDAK RELIANT 300 MICROFILMER Optional Accessories

Kodamatic Indexer Accessory

For automatic exposure of index-code lines on the film simultaneously as documents are microfilmed. Look-up and retrieval of information on microfilm is made far easier, faster, and surer by the Kodamatic Indexer.

Accessory Film Units

The selling price of the basic Recordak Reliant 300 Microfilmer includes a choice of film units, 32X duplex-duo or 20X standard. Additional film units of either reduction ratio are available as optional accessories for increased microfilming flexibility and economy. One microfilmer can thus serve several departments, with the records of each kept in uninterrupted continuity.

Automatic Feeder

For sustained microfilming operations and in order to ease operator workloads, an accessory automatic feeder can be furnished with, or added to, the basic Recordak Reliant 300 Microfilmer unit. Feeder speed is synchronized with the microfilmer speed in order to assure precision selectivity and dependability of the feeder-microfilmer combination.

Endorser-Canceler Accessory

For applications in check-handling departments of banks, business offices, industrials, hotels, and other organizations with considerable check volume, an automatic Endorser Accessory is available for combining automatic endorsing with microfilming in a single check-handling operation. The capacity of the Recordak Endorser Accessory is equivalent to and is synchronized with that of the Recordak Reliant 300 Microfilmer for maximum efficiency and accuracy of registration of the endorsement on each item handled. For bank bookkeeping-department microfilming operations, the Recordak Endorser Accessory is adaptable for use as a canceler to certify date of payment of "on us" items paid for depositors.

Accessory Document Counter

For registering the number of documents microfilmed as a record of operator production or daily volume. Accuracy of item count is exceptionally high when used with the precision-selective Recordak Automatic Feeder.

Accessory Exposure Control Kit

A color-coded knob control for easy manual setting of optimum exposure for vari-colored documents. Of special value in systems in which multi-colored documents predominate and in which the microfilm negative is used as a means for producing enlarged facsimile prints.

Accessory Hand Feed Shelf and Work-Center Table

An accessory hand feed shelf and a work-center table especially designed for the "Reliant 300" are also available as accessory aids to operator efficiency and convenience.

The Recordak Reliant 300 Microfilmer, Model RO, is distinctive and attractive in styling and appearance as well as efficient and dependable in its operation. Modern decorator colors harmonize with present-day office decor for added eye-appeal and pride of ownership.

Dependable performance has been Kodak-engineered and Kodak-built into the Recordak Reliant 300 Microfilmer, and is backed by the nationwide Recordak Service Organization. Operating from 39 Recordak branches in the principal cities and from upwards of 175 additional business centers throughout the United States, Recordak Service Representatives are promptly available to every U.S. community. The specialized experience of these career technicians, who are solely concerned with maintaining Recordak equipment at its highest potential of efficiency, is an important plus-value for Recordak customers . . . equally with the inherent product quality which has established Recordak as First and Foremost in Microfilming, since 1928.
